HELIUM CARBON BLOCKS

New range of carbon blocks specially designed for steering systems fitted in racing carbon hulls. Blocks are clean and bonding the cheeks is very simple, laminating over the end and wedges , it makes the system very strong but still lightweight.

- ◆ sheaves carbon ; can be sold separately
- ◆ cheek/box : carbon
- ◆ shaft: titanium
- ◆ bearings: stainless steel or **ceramic (NEW)**

Carbon blocks are part of the **HELIUM range**, made of

- ◆ Titanium wheel 3 spokes
- ◆ Carbon pedestal,
- ◆ Sprocket or drum steering
- ◆ Vectran lines
- ◆ Helium cars and tracks (see photos)
- ◆ Extra light aluminium tillers

Currently fitted on :
Volvos, TP52, IRCs

JP3 block bearing allows loads , equally in and out.

This is too often not the case with on deck sheaves originally made for runners or halyards ,efficient one way, but creating friction when reversing.

**Simply the best
weight / performance ratio**
